

# Energy performance certificate (EPC)

|                                                          |                        |                                              |
|----------------------------------------------------------|------------------------|----------------------------------------------|
| Dunsdale<br>Broad Park<br>Oreston<br>PLYMOUTH<br>PL9 7QF | Energy rating<br><br>G | Valid until: 6 July 2036                     |
|                                                          |                        | Certificate number: 0360-2863-8630-2206-7425 |

|                  |                        |
|------------------|------------------------|
| Property type    | Semi-detached bungalow |
| Total floor area | 63 square metres       |

## Rules on letting this property

### You may not be able to let this property

This property has an energy rating of G. It cannot be let, unless an exemption has been registered. You can read [guidance for landlords on the regulations and exemptions \(https://www.gov.uk/guidance/domestic-private-rented-property-minimum-energy-efficiency-standard-landlord-guidance\)](https://www.gov.uk/guidance/domestic-private-rented-property-minimum-energy-efficiency-standard-landlord-guidance).

Properties can be let if they have an energy rating from A to E. You could make changes to [improve this property's energy rating](#).

## Energy rating and score

This property's energy rating is G. It has the potential to be E.

[See how to improve this property's energy efficiency.](#)

The graph shows this property’s current and potential energy rating.

Properties get a rating from A (best) to G (worst) and a score. The better the rating and score, the lower your energy bills are likely to be.

For properties in England and Wales:

- the average energy rating is D
- the average energy score is 60

# Breakdown of property’s energy performance

## Features in this property

Features get a rating from very good to very poor, based on how energy efficient they are. Ratings are not based on how well features work or their condition.

Assumed ratings are based on the property’s age and type. They are used for features the assessor could not inspect.

| Feature | Description                                        | Rating    |
|---------|----------------------------------------------------|-----------|
| Wall    | Granite or whin, as built, no insulation (assumed) | Very poor |
| Roof    | Pitched, 25 mm loft insulation                     | Poor      |
| Roof    | Pitched, no insulation                             | Very poor |
| Window  | Mostly double glazing                              | Poor      |

| Feature              | Description                                 | Rating    |
|----------------------|---------------------------------------------|-----------|
| Main heating         | Room heaters, wood logs                     | Very poor |
| Main heating control | No thermostatic control of room temperature | Poor      |
| Hot water            | Electric instantaneous at point of use      | Very poor |
| Lighting             | Below average lighting efficiency           | Poor      |
| Floor                | Suspended, no insulation (assumed)          | N/A       |
| Air tightness        | (not tested)                                | N/A       |
| Secondary heating    | Portable electric heaters (assumed)         | N/A       |

## Low and zero carbon energy sources

Low and zero carbon energy sources release very little or no CO<sub>2</sub>. Installing these sources may help reduce energy bills as well as cutting carbon emissions. The following low or zero carbon energy sources are installed in this property:

- Biomass main heating

## Primary energy use

The primary energy use for this property per year is 700 kilowatt hours per square metre (kWh/m<sup>2</sup>).

► [About primary energy use](#)

## Additional information

Additional information about this property:

- PV recommended  
When considering the PV installation consider installing PV battery and a PV diverter for water heating.
- Stone walls present, not insulated

## Smart meters

This property had **no smart meters** when it was assessed.

Smart meters help you understand your energy use and how you could save money. They may help you access better energy deals.

[Find out how to get a smart meter \(https://www.smartenergygb.org/\)](https://www.smartenergygb.org/)

# How this affects your energy bills

An average household would need to spend **£3,157 per year on heating, hot water and lighting** in this property. These costs usually make up the majority of your energy bills.

You could **save £1,725 per year** if you complete the suggested steps for improving this property’s energy rating.

This is **based on average costs in 2026** when this EPC was created. People living at the property may use different amounts of energy for heating, hot water and lighting.

---

## Heating this property

Estimated energy needed in this property is:

- 13,474 kWh per year for heating
- 1,372 kWh per year for hot water

## Impact on the environment

This property’s environmental impact rating is C. It has the potential to be A.

Properties get a rating from A (best) to G (worst) on how much carbon dioxide (CO2) they produce each year.

## Carbon emissions

|                                      |                   |
|--------------------------------------|-------------------|
| An average household produces        | 6 tonnes of CO2   |
| This property produces               | 1.5 tonnes of CO2 |
| This property’s potential production | 0.6 tonnes of CO2 |

You could improve this property’s CO2 emissions by making the suggested changes. This will help to protect the environment.

These ratings are based on assumptions about average occupancy and energy use. People living at the property may use different amounts of energy.

# Steps you could take to save energy

► [Do I need to follow these steps in order?](#)

---

## Step 1: Increase loft insulation to 270 mm

|                           |               |
|---------------------------|---------------|
| Typical installation cost | £900 - £1,200 |
|---------------------------|---------------|

|                       |      |
|-----------------------|------|
| Typical yearly saving | £417 |
|-----------------------|------|

|                                          |      |
|------------------------------------------|------|
| Potential rating after completing step 1 | 11 G |
|------------------------------------------|------|

---

## Step 2: Flat roof or sloping ceiling insulation

|                           |               |
|---------------------------|---------------|
| Typical installation cost | £900 - £1,200 |
|---------------------------|---------------|

|                       |      |
|-----------------------|------|
| Typical yearly saving | £119 |
|-----------------------|------|

|                                                 |      |
|-------------------------------------------------|------|
| Potential rating after completing steps 1 and 2 | 14 G |
|-------------------------------------------------|------|

---

## Step 3: Internal wall insulation

|                           |                  |
|---------------------------|------------------|
| Typical installation cost | £7,500 - £11,000 |
|---------------------------|------------------|

|                       |      |
|-----------------------|------|
| Typical yearly saving | £772 |
|-----------------------|------|

|                                                |      |
|------------------------------------------------|------|
| Potential rating after completing steps 1 to 3 | 34 F |
|------------------------------------------------|------|

---

## Step 4: Floor insulation (suspended floor)

|                           |                  |
|---------------------------|------------------|
| Typical installation cost | £5,000 - £10,000 |
|---------------------------|------------------|

|                       |      |
|-----------------------|------|
| Typical yearly saving | £239 |
|-----------------------|------|

|                                                |      |
|------------------------------------------------|------|
| Potential rating after completing steps 1 to 4 | 42 E |
|------------------------------------------------|------|

---

## Step 5: Floor insulation (solid floor)

|                           |                  |
|---------------------------|------------------|
| Typical installation cost | £5,000 - £10,000 |
|---------------------------|------------------|

|                       |     |
|-----------------------|-----|
| Typical yearly saving | £35 |
|-----------------------|-----|

|                                                |
|------------------------------------------------|
| Potential rating after completing steps 1 to 5 |
|------------------------------------------------|

|      |
|------|
| 43 E |
|------|

## Step 6: Draught proofing

|                           |             |
|---------------------------|-------------|
| Typical installation cost | £150 - £250 |
|---------------------------|-------------|

|                       |     |
|-----------------------|-----|
| Typical yearly saving | £29 |
|-----------------------|-----|

|                                                |
|------------------------------------------------|
| Potential rating after completing steps 1 to 6 |
|------------------------------------------------|

|      |
|------|
| 44 E |
|------|

## Step 7: Solar water heating

|                           |                 |
|---------------------------|-----------------|
| Typical installation cost | £4,000 - £7,000 |
|---------------------------|-----------------|

|                       |     |
|-----------------------|-----|
| Typical yearly saving | £85 |
|-----------------------|-----|

|                                                |
|------------------------------------------------|
| Potential rating after completing steps 1 to 7 |
|------------------------------------------------|

|      |
|------|
| 46 E |
|------|

## Step 8: High performance external doors

|                           |               |
|---------------------------|---------------|
| Typical installation cost | £900 - £1,200 |
|---------------------------|---------------|

|                       |     |
|-----------------------|-----|
| Typical yearly saving | £29 |
|-----------------------|-----|

|                                                |
|------------------------------------------------|
| Potential rating after completing steps 1 to 8 |
|------------------------------------------------|

|      |
|------|
| 47 E |
|------|

## Step 9: Solar photovoltaic panels, 2.5 kWp

|                           |                  |
|---------------------------|------------------|
| Typical installation cost | £8,000 - £10,000 |
|---------------------------|------------------|

---

Typical yearly saving

£241

## Advice on making energy saving improvements

[Get detailed recommendations and cost estimates](#)

## Help paying for energy saving improvements

You may be eligible for help with the cost of improvements:

- Free energy saving improvements: [Warm Homes Local Grant \(WHLG\)](#)
- Heat pumps and biomass boilers: [Boiler Upgrade Scheme](#)
- Help from your energy supplier: [Energy Company Obligation](#)

## Who to contact about this certificate

### Contacting the assessor

If you're unhappy about your property's energy assessment or certificate, you can complain to the assessor who created it.

**Assessor's name**

James Wildman

**Telephone**

07817509309

**Email**

[wildman310388@gmail.com](mailto:wildman310388@gmail.com)

### Contacting the accreditation scheme

If you're still unhappy after contacting the assessor, you should contact the assessor's accreditation scheme.

**Accreditation scheme**

Elmhurst Energy Systems Ltd

**Assessor's ID**

EES/029783

**Telephone**

01455 883 250

**Email**

[enquiries@elmhurstenergy.co.uk](mailto:enquiries@elmhurstenergy.co.uk)

---
